This book contains the first three songs that a singer-songwriter can record. It consists of a set of strategies that can be integrated in the composition of the song. It's based on the poetry and music of Gómez Arellano, a Mexican composer and poet. . Category: Spanish literature Category: Philosophical literature Category: Spanish poetry1. Field of the Invention The present invention relates to a phosphor which emits light by applying an electric field thereto and to a method of manufacturing such a phosphor. In particular, the present invention relates to a phosphor which emits light upon application of a high electric field such as a high voltage, and to a method of manufacturing such a phosphor. 2. Description of the Related Art A phosphor is used as a light-emitting material to convert light emitted from a light source, such as a lamp, into visible light or near-infrared light. It is also used as a material for a light source for an image display apparatus, such as a cathode ray tube (CRT) or a plasma display panel (PDP), in order to improve the display quality of the image display apparatus. A phosphor is also used in a solid-state image pickup apparatus, such as a photoelectric conversion apparatus which converts a visible light image into an electric signal or in a semiconductor integrated circuit, such as a laser light source and a light-emitting diode (LED). A phosphor which is used in such a device is required to have high luminance and a long service life. To improve the luminance, a phosphor having a high-energy emitting property can be used, which includes a compound of a nitride or oxynitride, or a compound of bismuth and a rare earth element. Such a phosphor, however, generally has a short service life. To improve the service life of a phosphor, it is known that the particle size of the phosphor is set to a range of from 0.5 to 1 μm or less. Such a phosphor is formed by firing or sintering the phosphor which contains a nitride or oxynitride of a compound of a nitride or oxyn 82157476af
